

Retain the equity already working.

AVALA OS

GOVERNED AI & AUTOMATION DELIVERY OS

Preserve the AvalaOS name, current A silhouette, premium wordmark proportions, navy and amber palette, enterprise tone, and canonical tagline.

Give the name a future meaning without inventing a current module.

OS

Operating System

- Assess → Avala Assess
- Validate → Avala Govern
- Assemble → Studio + future assembly
- Launch → Avala Delivery
- Audit → Monitor + Admin

Concept 1 — Modular A

- Strong assembly metaphor
- Clear five-part construction
- More radical silhouette
- Risk: reduced recognition at small sizes

Concept 2 — Governed Bridge

- Expresses the connective control layer
- Amber pathway signals governed movement
- Distinctive at large scale
- Risk: more illustrative than iconic

Concept 3 — Assembly Node

- Preserves the current A silhouette
- Adds a subtle joining node
- Retains navy / amber equity
- Scales with the strongest recognition

Recommend the Assembly Node — evolve, do not replace.

- Keep AvalaOS as the product brand
- Use the node only in approved future contexts
- Retain current wordmark proportions
- Keep amber below 15% of visual area
- Never imply current app generation
- Test mono, small-size, and accessibility variants before adoption
