

From process evidence to governed delivery.

AvalaOS — the governed decision and delivery layer around AI, automation, and human work.

EVIDENCE • HUMAN AUTHORITY • TRACEABLE HANDOFF

Automation portfolios fail before development begins.

- Technology-first selection
- Inconsistent assessment methods
- Incomplete evidence
- Spreadsheet decisions
- Approval by email
- Context lost at handoff

Not every process needs AI.

Stable + structured	➡	Rules / workflow	Deterministic controls
Repetitive UI work	➡	RPA	Only where stronger interfaces are unavailable
Unstructured content	➡	AI assistance	Extraction, classification, summarisation
Context-heavy inquiry	➡	Bounded agent assistance	Evidence synthesis with controls
Material-risk judgment	➡	Human / HITL	Accountable approval
Mixed end-to-end work	➡	Hybrid model	A governed combination

The decision trail breaks when every phase starts over.

Fragmented path

- Workshop
- Spreadsheet
- Opinion
- Document
- Email approval
- Delivery tool
- Lost context

AvalaOS path

- Evidence
- Deterministic decision
- Human governance
- Governed artifact
- Delivery handoff
- Outcome visibility

One governed lifecycle keeps evidence and accountability attached.

01 Assess

Evidence-qualified recommendation

02 Govern

Human-owned controls

03 Studio

Approved artifacts

04 Delivery

Source-linked work

05 Monitor

Outcome visibility

Avala Assess turns evidence into an explainable recommendation.

- Process inventory
- Primitive-level decomposition
- Evidence confidence and gaps
- Versioned deterministic recommendation
- Hybrid operating model
- Decision Pack

Govern resolves material risk before handoff.

- Evidence attestations
- Assumptions and gaps
- Action-specific controls
- Approval conditions
- Handoff readiness

AVALA GOVERN - READ-ONLY OVERVIEW

Governance workbench

Review source-linked references, assumptions, material risk, and handoff readiness before a permitted action is taken. Actions remain on their existing Assess and Studio surfaces.

• Synthetic · read-only Open Studio Open Process Catalog

REVIEW QUEUE	MATERIAL RISK	RECORDED REFERENCES	HANDOFFS
3 processes requiring attention	7 high or critical records	7 references in the current source ledger	3 submitted, accepted, or completed

Review queue

Source-derived process states that need a human decision.

• 3 needs attention

AP Invoice Exception Handling
Finance Operations · Critical criticality

• Ready for Review

Purchase Requisition Review
Procurement · High criticality

• In Review

Vendor Master Change Validation
Finance Controls · Critical criticality

• Changes Requested

Control summary

Boundaries that shape the next action.

REFERENCES
7 linked references in the current ledger

ASSUMPTIONS
Review source assumptions on the assessment record

CONTROL GAPS
1 recorded gap requires source-level resolution

HANDOFF STATE
3 submitted or accepted records

AUTHORITY
Existing source surfaces retain their scope and

- BRD
- FRD
- PDD
- Human-readable preview
- Immutable revisions
- Independent review
- Separate approval

One governed handoff carries the why into delivery.

- Source-linked work items
- Tasks and acceptance context
- Ownership and blockers
- Delivery Pack
- Evidence and lineage

Monitor shows what is ready — and what is not recorded.

- Initiative disposition
- Readiness and risk
- Open work and blockers
- Source lineage
- Outcome recording state

Familiar roles and artifacts reduce adoption friction.

- Process owner
- Process analyst
- Business analyst
- Control reviewer

- Delivery lead
- Executive / buyer
- Platform admin

Process catalog • Decision Pack • BRD / FRD / PDD • Work items • Delivery Pack • Portfolio views

Control boundaries keep model authority and decision authority separate.

- BYOK-ready architecture
- Designed for customer-controlled model access
- Server-side secret boundary
- Human approval
- Evidence and audit
- Fail-closed behavior

Start with one decision, then earn the right to scale.

Select one process before committing build budget.

Bring a named process owner, a candidate process, available evidence, and known constraints. Leave with a reviewed Decision Pack, control requirements, and an explicit next-step disposition.

1

Run a governed assessment

2

Review the recommendation

3

Then decide whether to build

Turn discovery into a repeatable, evidence-backed client method.

- Reusable assessment structure
- Client-specific evidence and Decision Pack
- Governed BRD/FRD/PDD package
- Delivery-handoff preparation
- Repeatable review and control language

DECISION CONTRACT

Define the partner model before making a commercial promise.

Partner

- Client relationship
- Discovery
- Implementation
- Enablement
- Approved customisation

AvalaOS + joint boundary

- Platform IP
- Decision law
- Product releases
- Change control
- Support and evidence ownership

Build portfolio discipline before technology becomes the default.

- Process and application inventory
- Evidence and accountable owners
- Governed dispositions
- Application-readiness bands
- Dependency waves
- Risk, control, and economics ranges

DECISION CONTRACT

Give every initiative the same decision-to-handoff contract.
