

# Evaluate before you automate. Govern before you execute.

The governed decision and delivery layer around AI, automation, and human work.

EVIDENCE • HUMAN AUTHORITY • TRACEABLE HANDOFF

# Enterprises are choosing tools before understanding the work.

---

- AI applied where deterministic rules would be safer
- RPA selected where APIs or workflow would be stronger
- Agents introduced without sufficient evidence or control
- Human accountability introduced after the design is committed

# One process is not one technology.

|                        |   |                          |                                                |
|------------------------|---|--------------------------|------------------------------------------------|
| Stable + structured    | ➡ | Rules / workflow         | Deterministic controls                         |
| Repetitive UI work     | ➡ | RPA                      | Only where stronger interfaces are unavailable |
| Unstructured content   | ➡ | AI assistance            | Extraction, classification, summarisation      |
| Context-heavy inquiry  | ➡ | Bounded agent assistance | Evidence synthesis with controls               |
| Material-risk judgment | ➡ | Human / HITL             | Accountable approval                           |
| Mixed end-to-end work  | ➡ | Hybrid model             | A governed combination                         |

# One governed lifecycle keeps the evidence attached.

## 01 Assess

Evidence-qualified recommendation

## 02 Govern

Human-owned controls

## 03 Studio

Approved artifacts

## 04 Delivery

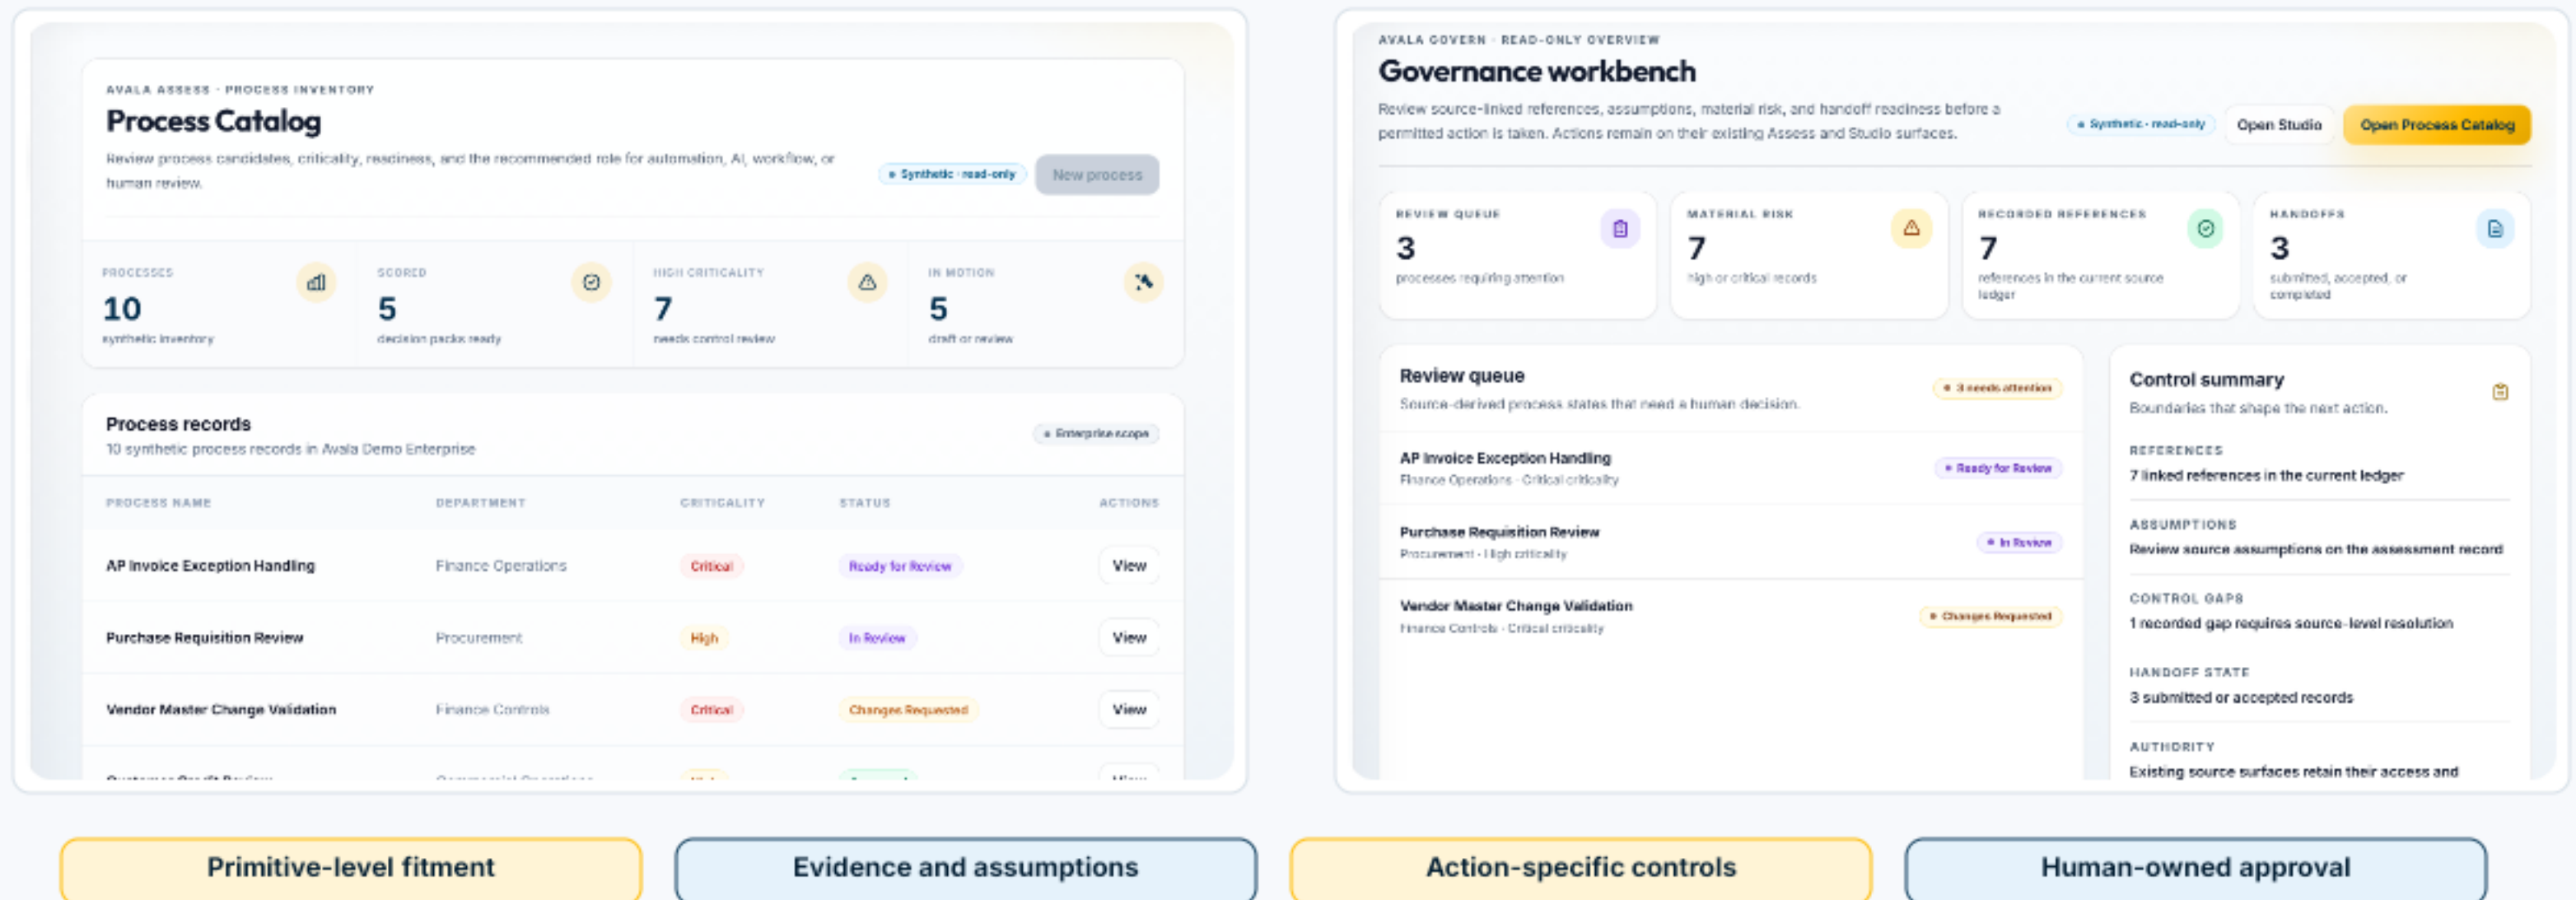

Source-linked work

## 05 Monitor

Outcome visibility

# Evidence becomes a governed decision.

Process decomposition and deterministic recommendation meet evidence gaps, material-risk review, control conditions, and human approval.

\_\_\_\_\_

- \_\_\_\_\_

# Approved context reaches delivery without losing the why.

One governed handoff prepares source-linked work in Delivery. Monitor provides readiness, risk, blocker, lineage, and recorded-outcome visibility.
